I want you to build a complete, production-ready, professional blogging website from scratch.

The website must be fully functional from both the FRONTEND and BACKEND/ADMIN PANEL. Do not create a static demo or UI-only template. Every important feature must actually work with PHP and MySQL.

1. PROJECT GOAL

Build a modern, professional, clean, fast, responsive and SEO-friendly blog platform targeting a GLOBAL English-speaking audience.

The website should initially focus on:

- Artificial Intelligence
- Technology
- Data Science
- Programming
- Research
- Student/Career Guidance
- Productivity
- Freelancing and Digital Skills

The architecture must be flexible so that more categories can be added later.

The website should look like a real professional technology/media publication, not like a basic student project.

The design should be clean, premium, modern, trustworthy and attractive while remaining easy to use.

---

2. TECHNOLOGY STACK

Use:

- PHP 8+
- MySQL
- HTML5
- CSS3
- JavaScript
- Bootstrap 5 OR Tailwind CSS
- Font Awesome or another lightweight icon library
- AJAX where useful
- PDO with prepared statements
- Modular/reusable PHP components

Do NOT use unnecessary frameworks or dependencies.

The website must work properly on a standard PHP + MySQL hosting environment such as cPanel.

Keep the code organized, readable, maintainable and production-ready.

---

3. WEBSITE STRUCTURE

Create the following frontend pages:

1. Home
2. Blog
3. Single Blog Post
4. Categories
5. Category Detail
6. Search Results
7. About Us
8. Contact Us
9. Privacy Policy
10. Terms & Conditions
11. Disclaimer
12. Author Profile
13. 404 Page
14. Sitemap page if useful

Create an admin panel with:

1. Admin Login
2. Dashboard
3. Posts
4. Add Post
5. Edit Post
6. Categories
7. Tags
8. Authors/Users
9. Comments
10. Media Library
11. Contact Messages
12. SEO Settings
13. Website Settings
14. Profile
15. Logout

---

4. FRONTEND DESIGN

Create a premium modern blog design.

Design requirements:

- Clean
- Minimal

- Professional
- Attractive
- User-friendly
- Fast loading
- Mobile-first
- Fully responsive
- Good whitespace
- Excellent typography
- Clear visual hierarchy
- Professional cards
- Beautiful article pages
- Smooth hover effects
- Subtle animations
- No excessive animations
- No clutter
- No unnecessary gradients
- No outdated UI

Use a professional font combination.

Prefer a modern highly readable font such as:

- Inter
- Manrope
- Plus Jakarta Sans

For article content, use a highly readable typography system.

Make sure font sizes, line heights and spacing are comfortable for long-form reading.

---

5. COLOR THEME

Create a professional technology/editorial theme.

Use a clean primary color with neutral backgrounds.

The color palette must have:

- Primary color
- Secondary/accent color
- Background
- Surface/card color
- Text
- Muted text
- Border

Maintain good contrast and accessibility.

Do not
